

DMC MEKONG IMAGE TRAVEL & EVENTS

RECYCLE POLICY

DMC Mekong Image Travel & Events is committed to reducing and recycling waste as part of our commitment to sustainability. We believe that everyone has a role to play in protecting the environment, and we are committed to doing our part by reducing our waste footprint.

Goals

Our goal is to reduce our non-recyclable and recyclable waste by 80% by 2025. We will achieve this goal by implementing a comprehensive waste reduction and recycling program that includes the following initiatives:

Reduce single-use plastics: We will eliminate single-use plastic items from our operations, including straws, utensils, cups, and bags.

Recycle everything possible: We will provide recycling bins for all types of recyclable materials, including paper, plastic, metal, and glass.

Educate our employees and guests: We will educate our employees and guests about the importance of waste reduction and recycling.

Specific Initiatives

To achieve our goals, we will implement the following specific initiatives:

Single-use plastics: We will eliminate single-use plastic items from our operations by the end of 2024 completely. We will replace these items with sustainable alternatives, such as compostable straws, utensils, cups, and bags.

Recycling: We have provided recycling bins for all types of recyclable materials in all of our offices. We are also working with our waste hauler to ensure that all of our recyclable materials are properly recycled.

Education: We will educate our employees and guests about the importance of waste reduction and recycling. We will create a waste reduction and recycling awareness campaign that includes educational materials, training, and incentives.

Metrics

We will track our progress towards our waste reduction and recycling goals by measuring the following metrics:

Total waste generated: We will measure the total amount of waste generated by our operations.

Non-recyclable waste: We will measure the amount of non-recyclable waste generated by our operations.

Recyclable waste: We will measure the amount of recyclable waste generated by our operations.

We believe that these initiatives will help us to achieve our goal of reducing our waste footprint by 80% by 2025. We are committed to making a difference in the fight against climate change, and we believe that waste reduction and recycling is an important part of that effort.
